## Ammar Bajaber

"Number of deaths caused by Malaria in Kenya decreased dramatically after 2010. From that dashboard, I clicked on Kenya on the map, this showed numbers of deaths caused by Malaria from 2000 to 2014. From 2000 to 2010 there was a fluctuation of number of deaths where it respectively decreased from 2000 to 2002 but increased in 2003. However, number of deaths decreased by half in 2004 from the previous year, and increased again in 2005 to continue decreasing to 2010. Furthermore, number of deaths decreased dramatically from 25,000 deaths in 2010 to around 1000 deaths in 2011. Finally, number of deaths stayed very low for the following years compared to the high number of deaths from 2000 to 2010."

"In 2003, there was dramatic increase of number of deaths caused by Malaria in Angola from the prior years. From that dashboard, I clicked on Angola on the map, this showed number of deaths caused by Malaria from 2000 to 2014. 2000 and 2001 had the same number of deaths which was around 9000 deaths. However, in 2002 number of deaths increased by around 5000 deaths to become around 14,000 deaths. Furthermore, in 2003 the number of deaths increased dramatically by 171% to become around 38,000 deaths. However, in the following year, it decreased by 68% to become around 12000 deaths. In addition, the number of deaths mostly decreased by few thousands after 2005."

"In Mozambique the number of deaths caused by Malaria in 2012 decreased by half from 2007. From that dashboard, I clicked on Mozambique on the map, this showed the number of deaths caused by Malaria from 2007 to 2014. Deaths started from around 5800 in 2007 to continue decreasing to 2012 where it decreased by 50% to become around 2900 deaths. However, it started increasing by 3.4% in 2013 and by 13.3% in 2014 each from their previous years."
