Insight 1

https://public.tableau.com/profile/ammar.bajaber#!/vizhome/Project4-insight1/Dashboard3?publish=yes

This dashboard shows the number of views in each state.

We can see from the graphs that Florida has the highest number of views which is 3,869,821,903, while Mississippi had the lowest number of views which is 3,853,872.

I chose the map to show the location of each state with the number of views, and the bar chart to show the state in order based on the number of views.

Insight 2

https://public.tableau.com/profile/ammar.bajaber#!/vizhome/Project4-insight2/Story1?publish=yes

In this story it shows the number the number of likes and dislikes in each category and of views for each category.

We see from the graph that "Music" category had the greatest number of likes which is around 400 million and it comes first in the number of views of 8.8 billion views. On the other hand, "Entertainment" has the greatest number of dislikes which is 17 million but comes second in the number of views with 7 billion views.

I chose the side-by-side bar chart to compare the number of likes and dislikes for each category. And the chart bar for the next to give people an idea about the number of views for each category.

Insight 3

https://public.tableau.com/profile/ammar.bajaber#!/vizhome/Project4-insight3/Dashboard2?publish=yes

This Dashboard show the number of views and comments in each channel.

We see that "ibighit" channel has the greatest number of comments, but it comes in the 9th place in the number of views.

I chose the bar chart to show the number of comments in each channel, and the bar chart for the number of views to show as an extra information about the channel.
